

What is BioScanSRT-Fit?

The BioScanSRT-Fit combines the disciplines of Acupuncture, Biofeedback, and Homeopathy. A computerized scan is performed to record the reaction of your body to various stressors.

Using the information gathered, a protocol uniquely Fit to you can be created to support your journey to a balanced state.

How does it work?

The BioScanSRT-Fit software is based upon the widely accepted premise that every substance has its own unique energy signal or “energetic fingerprint”.

Using the BioScanSRT-Fit System, we can scan hundreds of stressors in just a few minutes right in the gym. The scanning process of BioScanSRT-Fit allows us to test the effects of potential stressors on your body and then evaluate whether the stressors may present a problem.

Potential stressors become problematic when your body’s unique response to the “energetic fingerprint” reveals a challenge, or stress to your system. This alters normal function and energy flow, ultimately compromising the efficiency and balance of your body.

The data gathered by the BioScanSRT-Fit is presented in an easy-to-read report. This gives you specific areas to work on over the next month to help balance your body and decrease your stress.

The BioScanSRT-Fit does not diagnose, treat or cure diseases.

Facility Information

2355 South 1070 West Suite D
Salt Lake City, Utah 84119 / ☎ 801-889-2224

Do you need to de-stress?

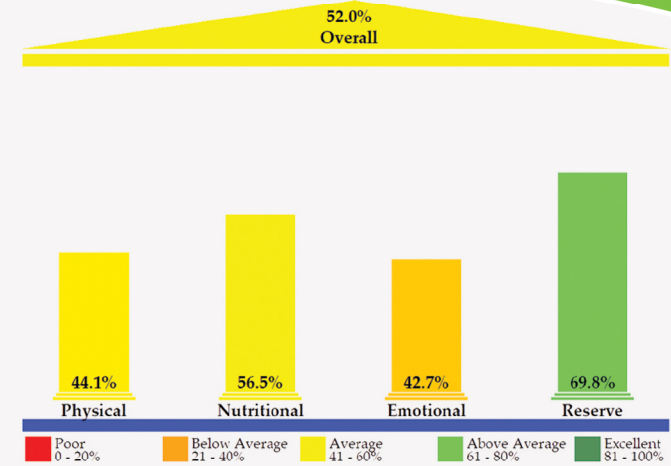

What does the BioScanSRT-Fit scan?

BioScanSRT-Fit uses electronic signals to scan four important pillars of health: Physical, Nutritional, Emotional and Reserve.

This scan is similar to an EKG and performed by attaching electrodes to AcuPoints on your hands.

Internal and external stressors have been shown to contribute to many symptoms and illnesses including:

Who can be scanned with the BioScanSRT-Fit System?

The BioScanSRT-Fit is safe for adults and children of all ages.

However, in an overabundance of caution, the BioScanSRT-Fit System is not to be used on pregnant women or on any person with any electrical device implanted in the body.

Once the scan is complete, you will see your pillar scores as well as a detailed report indicating which areas to focus on. Working on these areas will help improve your scores. This ultimately helps balance your body, so you can best pursue your fitness goals.
