**“LET THE TOOTH
BE KNOWN”**

1

DR. DAWN EWING

RDH, L-EMT-P, CCT, CTN, PhD.

Dr. Dawn Ewing is a naturopathic practitioner in Houston, Texas, Executive Director of the International Academy of Biological Dentistry and Medicine (IABDM), and author of Let the Tooth Be Known, now in its 4th edition. She began her career as a dental hygienist after graduating from the University of Texas Dental School in 1988 and was eventually appointed to the Texas State Board of Dental Examiners by the governor, serving two terms. A thirst for knowledge about the human body immersed her in the world of emergency medicine. Becoming a Nationally Registered Paramedic, she spent 12 years on a 911 ambulance and four years in international air ambulance transport.

She was drawn back into dentistry by a biological dentist. He was looking for someone with knowledge of the body as a whole, not just the mouth. This new excitement led her to return to school for a doctorate in naturopathy, a PhD in holistic nutrition and a doctorate in integrative medicine at Capital University of Integrative Medicine. Dr. Ewing is an esteemed member of the International Health Technologies Medical Board and is a fascinating and experienced speaker.

2

CASE 1.

- Female Patient 'Denise'
- Referred to my office due to severe jaw pain

IHT Fall User Conference 2017 October 6 & 7, 2017

Denise was referred because she was in severe pain

The pain starts on the lower jaw and radiates down her neck. It was so bad that she went to ER, they told her it was a tooth. She saw a dentist that told her she needed a Root canal on #30.

She was referred to Endodontist for RCT #30. She decided to seek out a 2nd opinion at a biological DDS. The dentist sent her to me.

Here is her Panorex

What to do now?

- Nothing showed on the x-ray
- Remember there is always an exchange of energy BEFORE the chemistry happens.
- What does that mean?

We TEST with our EAV/MSA

- Using the MSA we have her hold the bar in her left hand. She extends her index finger and touches each tooth, one at a time on the right. I record the readings.
- Readings that are not in an acceptable range are “balanced”. Although this is NOT a diagnosis, it does give the operator valuable information.
- Let’s see what we found.

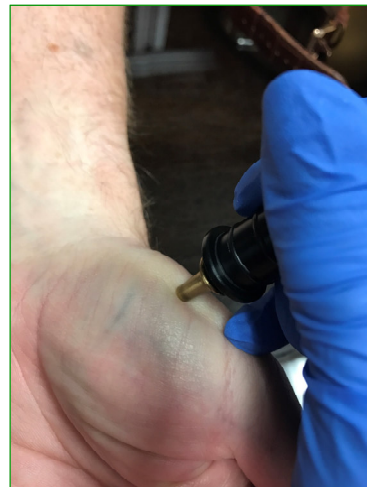

Testing Upper Right Teeth Patient touches the tooth using left hand YOU touch LY3 their Right hand

Testing Lower Right Teeth
Patient touches the tooth on their Right
YOU touch Ly2 on their Right hand

Testing Upper Left Teeth
Patient touches tooth on their Left
YOU touch the Ly3 on their Left hand

Testing Lower Left Teeth
Patient touches tooth on their Left
YOU touch Ly2 on their Left hand

IHT Fall User Conference 2017 October 6 & 7, 2017

11

First Let's Discuss
What A Drop Means?

- Healthy Happy Cell
- The Villain (Free Radicals) Oxidation, In a car it is rust, In a flower it is wilting, In a person it is aging.
- The Philanthropist (Antioxidants) Redox

How to Two Point a Tooth?

- #3 affects #14- How did I test that?
- Tested #14- low so I had her two point #14 and #3 at same time. Now the reading is 50.

After MSA, she was referred back to DDS for Neural Therapy on tooth #3 and #4

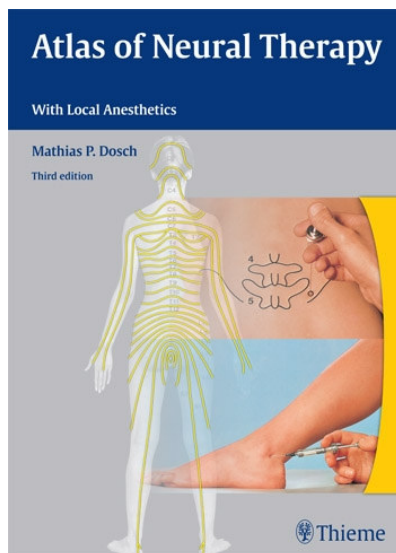

I told the patient to use
Traumeel 3 x day
until she felt improvement.

Arnica will work fine. Make sure it is
is one that can be taken orally!

Neural Therapy

- Best done with Procaine but other anesthetics may be used. “Prolotherapy”
- Some dentists/doctors mix the anesthetic with Ozone and some injectable homeopathics with it ie: Zeel, Traumeel, Lymphomysot
- The injection is a very small dose into trigger points or in this case, around a tooth or where a tooth used to be.
- This is not a block.

Neural Therapy is based on the theory that trauma can produce long-standing disturbances in the electrochemical function of tissues.

Among the types of tissues affected by trauma include scars, nerves or a cluster of nerves called ganglions.

A correctly administered Neural Therapy injection can often instantly and lastingly resolve chronic long standing illness and chronic pain.

Hot wiring a car that won't start

- The anesthetic allows the electricity to flow on an area that is blocked and is sometimes a “Fix” and other times is diagnostic itself.
- Cells in scar tissue have a different membrane potential from normal body cells, Whenever a cell has lost its normal membrane potential, ion pumps in the cell wall stop working.
- This means that abnormal minerals and toxic substances accumulate inside the cell. As a result, the cell loses the ability to heal itself and resume normal functioning.
- Procaine acts on the cell wall to allow the ion pumps to resume normal action and restore the membrane potential.

- The amazing part of Neural Therapy is that the site being treated can be very far away for the tissue in the body that is not functioning properly. For example, a scar on the chin can affect the low back. This is possible because of the vast network of nerves called the Autonomic Nervous System.

Topical Anesthetic

- In a pinch try a topical anesthetic orally. Paint on the area in question. Right on the gum. Certainly not as dramatic effect but may give you an idea if an area is a blockage of energy.

Results

- Neural therapy was done and after less than 30 seconds...
- Patient screams "SHUT THE FRONT DOOR!"
My Pain is GONE! Uses Traumeel for 2 weeks.
- 4 month follow up- pain still gone.

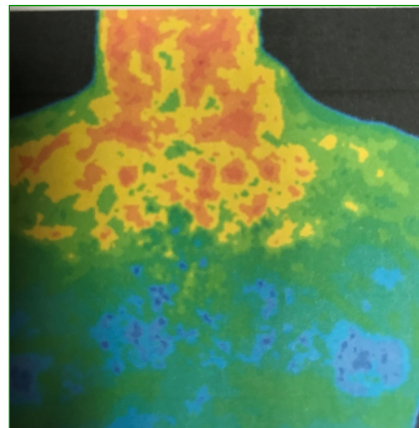

CASE 2.

- Male Patient 'Buddy'
- Referred to me due to a lump in his neck

IHT Fall User Conference 2017 October 6 & 7, 2017

Buddy- Referred from an MD for Thermography
Gross swelling – Left side of neck

IHT Fall User Conference 2017 October 6 & 7, 2017

24

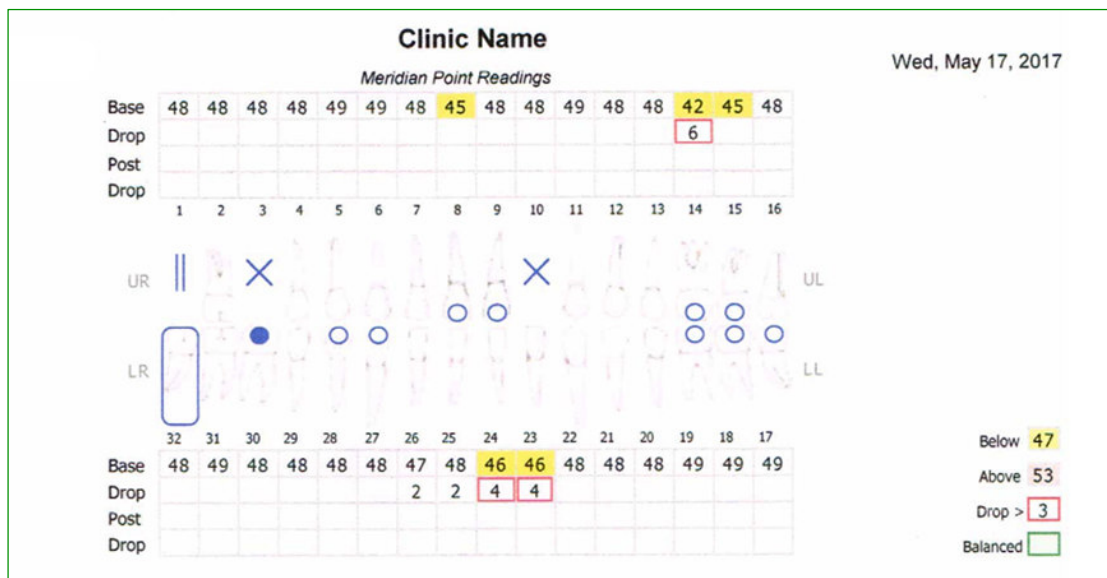

After seeing the thermography

I asked if I could take a panorex
because I suspected teeth.

After seeing the Panorex I do a Dental MSA of teeth

Suspicious area at Apex of #14 and #15

Notes: Could he get teeth cleaned and use Solidago? Could he get #14 extracted and try to save 15?

[Complaints](#)

Interesting comments that Buddy makes just in simple conversation:

- Buddy has been involved with the Rodeo since he was 4.
- He has had 9 Kidney stones. Seems to happen every other year. Last one was the size of a cue ball. Impassable, so he had surgery to remove it.

- I feel that, trauma to his teeth have damaged them (the teeth) such that they are affecting the kidney. We will use Solidago. Plus we have suggested his MD allow us to use homeopathics to reduce the stone formation. Calcarea Carbonica 30 c 10 pellets 1x week for 6 months and Lycopodium 15c, 10 pellets 1x week for 6 months.
- The integrative side of me wants to know what his uric acid level is and what his PTH is.

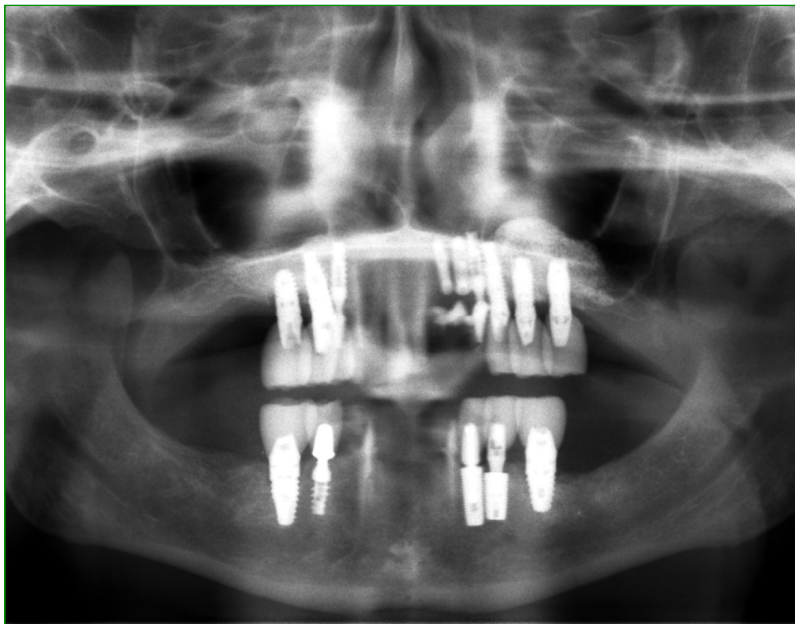

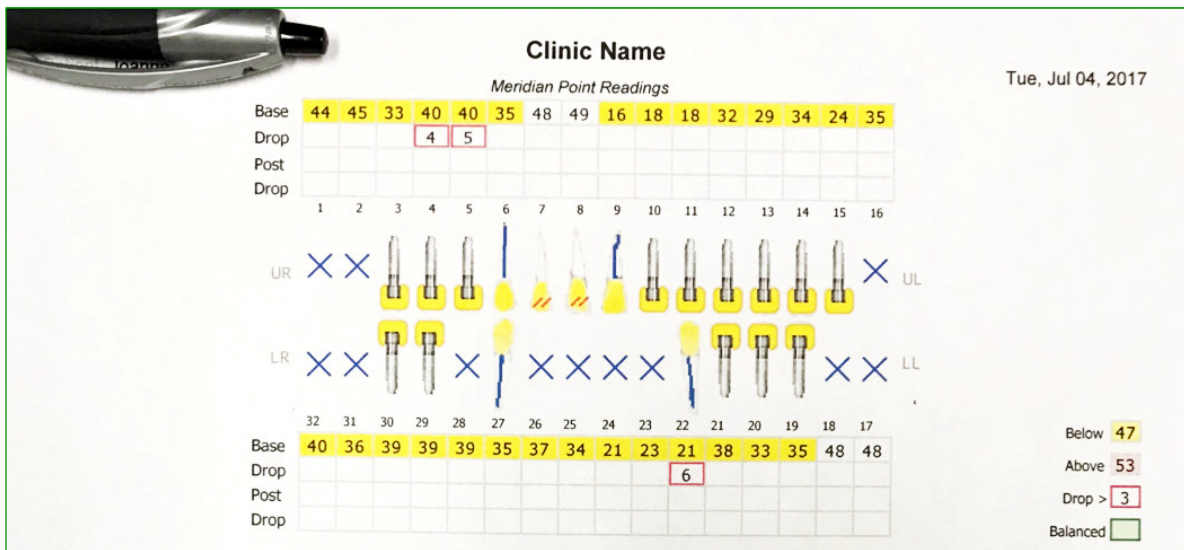

CASE 3.

- Female Patient 'Ann'
- Referred to me from M.D. due to sudden worsening of her autoimmune symptoms.

Extreme onset of Auto-Immune

- Known Lupus;
- Known RA;
- Sudden onset of pain all over;
- Years ago I saw her and we discussed extracting root canal teeth - Had 18 Root canals - 14 have been extracted
- Pain worse since dental work done;
- Not seeing a Biological Dentist.

Metal implant sensitivity : clinical and histological presentation

[Hartmann D, Letulé V, Schneider JJ, Flaig MJ.](#)

Abstract

Metal implant sensitivity (intolerance) can cause pain, reduced mobility, loosening of the implant and skin rashes. Knowledge of differential diagnoses, histology and appropriate diagnostics are essential for proper diagnosis. To outline typical clinical signs and histology in metal-implant-associated skin lesions we present three exemplary patients from our implant allergy outpatient department and give an overview of the current literature regarding metal implant sensitivity. In patients with a negative patch test the lymphocyte transformation test may reveal metal sensitization. Even "pure" titanium alloys may contain traces of nickel. The histology of implant-associated skin reactions goes from teleangiectatic postimplantation erythema to eczema and vasculitis. Based on the synopsis of history, clinical picture, allergological testing and histology, metal implant sensitivity can be diagnosed more precisely.

In patients with a negative patch test the lymphocyte transformation test may reveal metal sensitization. Even "pure" titanium alloys may contain traces of nickel.

ALL Titanium has Nickel in it

Patient Feedback

“My dentist could NOT believe how infected my jaw was as he was removing the implants. He said it did not show up in the x-ray”

CASE 4.

- Female Patient 'Rosie'
- Referred to us due to a growth in the oral cavity

IHT Fall User Conference 2017 October 6 & 7, 2017

- Has not seen a dentist in over 35 years;
- On the phone she describes a pimple by a tooth; Complains that she does have dental discomfort on occasion and can pinpoint it to her the right side.

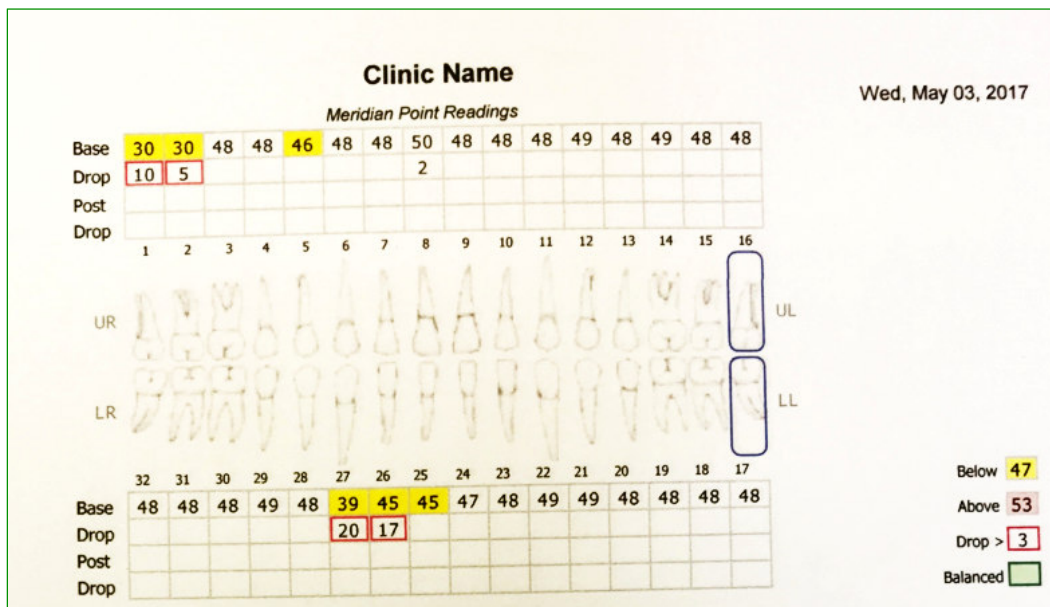

As Rosie arrives, an x-ray is taken and MSA of teeth done

Homeopathic of X-ray at 30 c is given after the exposure

Rosie is referred to a biological dentist

Happy Outcome

- Teeth 1 and 2 were extracted.
- The growth was excised and sent off for pathology. Results were benign.
- She got her teeth cleaned and is on track to return to the dentist for 6 month check-ups.

THINK TEETH!

- www.drdawn.net
- drdawn@drdawn.net
- www.IABDM.org
- Come to a meeting.
- Next one is in Houston Oct 19-21, 2017
- Next year in Scottsdale, AZ Oct 11-14th 2018

KEY TIPS FROM:

HAVE A GOOD REFERRAL NETWORK, - YOU CANNOT DO IT ALL ...

1. Reach out to 5 or more, neighboring clinics.
2. Write a personal thank you & include your business card & clinic brochure.
3. Print out their contact information and make it easily accessible in your testing rooms.
