News from Bio-energetic Based Medicine Researchers

### European Breakthrough in Allergy Therapy

By Tom Stone

**B**ioresonance therapy has been in use in Europe for 24 years. One of its most successful applications has been in the treatment of allergies. Well trained allergy bioresonance therapists are in high demand in Europe. Numerous clinics there have thriving practices treating nothing but allergies.

One clinical study of 200 patients performed in Innsbruck, Austria found that 83% of the participants in the study no longer had any allergic reactions to the previously offending allergens after completing this therapy. Another 11% were greatly improved and most of the remaining 6% didn't follow the protocols properly. This means that the efficacy of this therapy is very high. The following is a summary of this study published by the Institute for Regulative Medicine, Munich, Germany.<sup>1</sup>

Retrospective study based on 200 cases from medical practice

His success with the BICOM device (a popular bioresonance therapy device) led Dr. Peter Schumacher, a pediatrician from Innsbruck, Austria, to conduct a study of 200 cases of severe allergy and neurodermatitis in order to record the outstanding results achieved.

The study was based not on a carefully selected group but on a random

patient population within a six-month period, irrespective of age, diagnosis and severity of the condition.

An established diagnosis of allergy was a condition of inclusion in the study. Diagnosis was considered established not just if one or more tests yielded a positive result but also if there was a definite proven connection between the allergen and the allergy symptoms. Hayfever was excluded from the study due to the peculiar characteristics of that condition. The patients and their families were interviewed 6 months after the completion of therapy.

#### Results:

- 83 % of the cases treated were concluded successfully (since the conclusion of therapy patients had tolerated the allergen without reaction).
- 11 % of the cases treated improved (the features of the allergy were still present yet over time much less pronounced).
- 4.5 % the allergy remained unchanged. No therapeutic success could be identified or, after initial improvement, the same allergy recurred. However abstinence failures during therapy were detected in all members of this group.
- 1.5 % could not be evaluated since there had been no new contact with the allergen in the intervening period.

To highlight some particularly difficult cases: Of the 62 neurodermatitis cases recorded, 44 were symptom-free following BICOM treatment and 16 were improved and, of the 33 asthma cases, 29 were symptom-free and 4 improved.

Additional studies have found similar results.

The study mentioned above was conducted in 1993. Since that time additional advances with the therapy techniques have reduced the number of therapy sessions that are needed.

## European Breakthrough in Allergy Therapy

*Continued from page 1*

Even "central" food allergens are being treated successfully, often with only 1 to 3 treatments.

Why is bioresonance therapy so successful in the treatment of allergies?

Cyril W. Smith discovered that allergic reactions are principally an over reaction of the immune system to the electromagnetic field of the allergen. He developed a method of eliciting an allergic reaction from a patient by emitting the electromagnetic frequency that was the same as that of an allergen. When this signal was emitted in the same room as a patient who is allergic to that specific allergen it would produce an allergic reaction, the same reaction as produced by the allergen itself. Before the emission there was no reac-

tion. Upon stopping the emission the reaction subsided. The allergic reaction occurred without the presence of even one molecule of the allergen present in the environment of the patient<sup>2</sup>. Additional studies that support these theories can be found in the book, *Biophysical Therapy of Allergies*, Dr. Peter Schumacher<sup>3</sup>.

Why does the immune system over-react to the allergens?

The immune system's over-reaction is caused by toxic stresses. These toxins include mercury and other heavy metals, mold and fungus, residues of medications or vaccinations, petrochemicals, pesticides and other environmental toxins. These toxins can so stress the immune system that it becomes hyper-sensitive and overreacts.

When the stress on the immune system becomes too much, it can misinterpret the electro-magnetic charge of allergens. For example, it might misinterpret pollen for bacteria and have a mistaken reaction to the pollen. It is similar to what happens to us when we get over stressed. When we have had a bad day, trouble at work, wife upset with us, kids in trouble at school and the car breaks down, sometimes someone will ask us an innocent question and we are so stressed that we misinterpret it as a demand or a threat and over react with an angry response. It is similar for our immune system.

So the allergic reaction is essentially an inability of the immune system to respond to the presence of an allergen in a balanced way due to the presence of some form of stress.

How does bioresonance therapy for allergies work?

First the therapist tests to determine the cause of the allergic reaction. It must be determined whether the reaction is due to overexposure to the electromagnetic fields of the allergen or whether the stress on the immune system is being caused by the presence of one or more toxins in the system.

The testing can be carried out using electro-acupuncture, which is an advanced form of galvanic skin response testing. This type of test is more useful than blood tests or skin reaction tests because it is faster, non-invasive and more accurate.

With electro-acupuncture, the testing is done by exposing the patient to a therapy impulse of the "inverse oscillation" of the potential offending allergens. The ultra-fine electromagnetic impulses of the therapy signal are transferred to the patient via cables and electrodes.

It is the wave pattern of the electromagnetic charge of the allergen that is causing the stress on the immune system. This therapy impulse is sent to the body and the reaction of the immune system is checked by observing the response of the "allergy meridian" using a combination of the bioresonance therapy device and an electro-acupuncture testing device.

If canceling out the electromagnetic charge of the allergen that is being tested brings about a balancing ef-

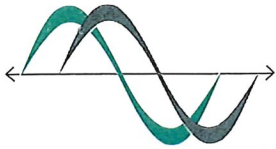

### Experience the BICOM for Yourself

Come visit our exhibit at the **8<sup>th</sup> International Congress on Anti-Aging Medicine & Biomedical Technologies**, December 15 - 17, 2000, at the Venetian Hotel in Las Vegas, NV. Stop by our booth, #914 and see how the BICOM technology works. Have a free, quick, easy, non-invasive allergy test. Enjoy a trip to Las Vegas and learn about the BICOM at the same time.

Hope to see you there!

## Allergy and Special Advanced Seminars for 2001

*Presented by Martin Keymer, Naturopath from Germany*

<u>Seminar</u>	<u>Date</u>	<u>Prerequisites</u>	<u>Cost</u>
Allergy Seminar	March 24 - 25	None	\$300
<b>Special Advanced 1</b> (Cross-Linked Test Technique III) (Master Therapy Plan) (Workshop / Practice)	March 27 - 30	Cross-Linked Test Technique II (Toxin Elimination Made Easy)	\$550
<b>Special Advanced 2</b> (Focal Toxicosis)	March 31 - April 1	Special Advanced 1	<b>*See Below</b>
<b><u>Location:</u></b>	Radisson Hotel Orlando Airport 5555 Hazeltine National Drive Orlando, FL 32812 1-800-333-3333 or 1-407-856-0100	<i>Ask for the <b>BRI discount rate</b> of <b>\$99</b> per night. Seminar will be held from 9 a.m. to 5 p.m.</i>	
<b><u>Registration:</u></b>	Please call 1-888-532-0897 or 1-619-247-5795. (Payment must be received 5 weeks in advance)		
<b>*<u>Costs:</u></b> Allergy Seminar and Special Advanced 1		\$825	
Special Advanced 1 & 2		\$825	
Allergy Seminar and Special Advanced 1 & 2		\$900

fect on the allergy meridian, this indicates that a stress from the tested allergen is present in the body and

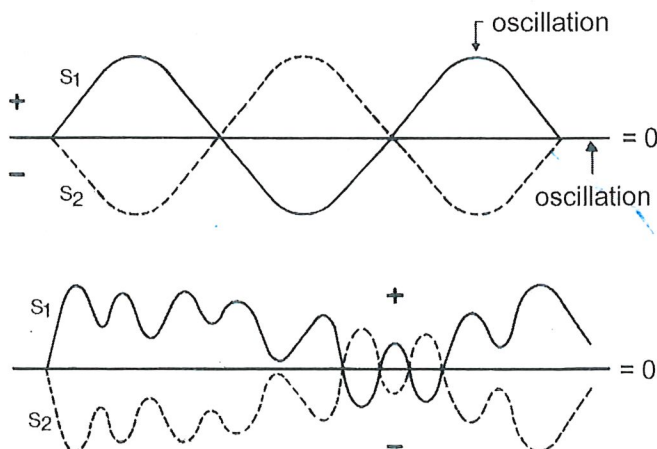

canceling its electromagnetic charge will relieve that stress. Special ampoules are used for testing. They are imprinted with the electromagnetic field information of the different allergens. Using these ampoules provides a quick and easy way to identify those allergen to which a person is reacting.

This development in allergy therapy is a profound de-

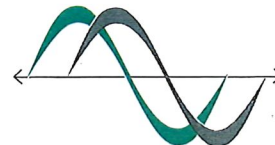

velopment for both patients and therapists alike. It provides a highly effective, non-invasive, pain free, comfortable method of creating rapid relief, from the not only the symptoms, but also the causes of allergic reactions. The results seem to be quite permanent. Patients who received this type of therapy as long as 8 years ago still have no allergic reactions to the treated allergens.

Allergic reactions can include neurodermatitis, hayfever, digestive disturbances, hives, headaches, depression, and more. These conditions have all responded very well to bioresonance allergy therapy.

## European Breakthrough in Allergy Therapy

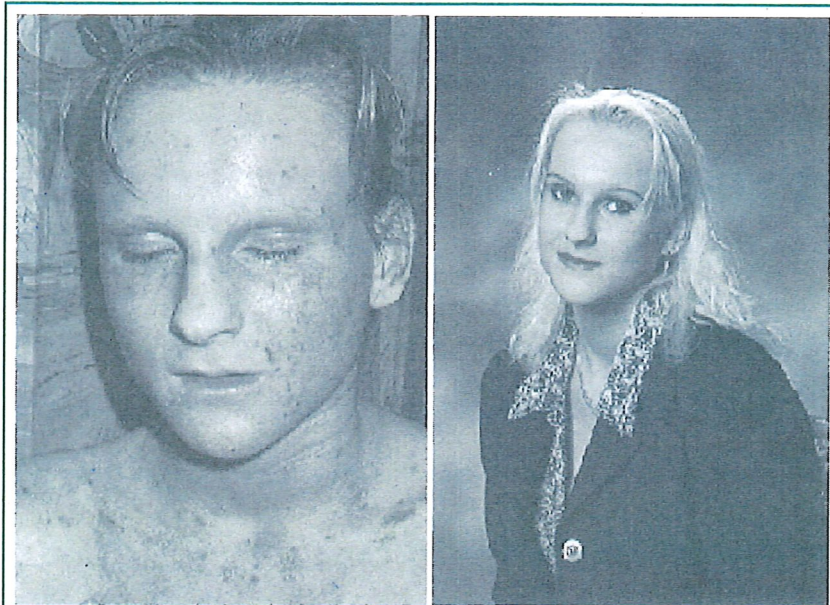

*Continued from page 3*

Even extreme allergic reactions have been eliminated with this therapy. A case of a ten year old girl with a severe reaction to strawberries is a good example. This young girl would break out in oozing blisters all over her body with just one bit of a strawberry. The reaction would come even if there was just a little bit of strawberry in a dish. This was a real problem because sometimes strawberry can be a hidden ingredient in a dessert and the patient would get reactions without knowing that the dessert contained strawberry. As a result, she had to constantly have a recovery kit to stop the reaction available and with her at all times. She had one thorough treatment, using bioresonance therapy after which she could eat strawberries without any reaction. Naturally, she and her parents were delighted.

Another interesting example is the case of a woman with long term allergies to dust. Her eyes were constantly itching and had been itching for many years. Right in the middle of receiving bioresonance therapy for the dust allergy, she suddenly exclaimed, "Oh my God, my eyes just stopped itching. I can't remember

when my eyes haven't itched."

The accompanying photographs

show the progress of a serious case of neurodermatitis that was caused by a food allergy. You can see the dramatic reduction and elimination of the skin reaction.

The BICOM device is approved by the Canadian Health Department for the treatment of allergies. For more information about bioresonance therapy research and case studies see the web sites [www.bri-research.com](http://www.bri-research.com) and [www.regumed.de](http://www.regumed.de).

About the author:

Tom Stone is one of the leading experts on bioresonance therapy. He has lectured and taught worldwide on the theory, application and use of bioresonance therapy. Seminars offered by BICOM Research Institute are available in the USA, Canada,

Mexico, and the United Kingdom. These seminars provide detailed information about bioresonance therapy techniques and technologies that are being used in Europe.
